COVER LETTER

I am writing to express my strong interest in the Backend Developer position at Amnex. As a final-year MCA student with a deep focus on building scalable backend solutions, I am particularly drawn to Amnex's commitment to smart city solutions and large-scale data infrastructure. My academic foundation, combined with my hands-on experience in database management and API integration, aligns perfectly with the technical rigor required to support your mission of delivering innovative, data-driven urban technologies. My primary strength lies in my ability to bridge complex data processing with user-centric functionality, as demonstrated by my work on my YouTube Video Summarizer project. By leveraging AI-based NLP to condense extensive transcripts into structured summaries, I successfully reduced review time by approximately 70% while architecting a robust MySQL schema to manage complex video data and history. This experience in integrating AI features with backend logic has prepared me to contribute effectively to the sophisticated data pipelines that power Amnex's smart city initiatives. Beyond my technical projects, I bring a disciplined approach to software development, supported by certifications in Java, Python, SQL, and Advanced Data Structures & Algorithms. My background as an NCC cadet, where I received the Best Leadership Award, has instilled in me a strong sense of teamwork and initiative that I am eager to apply within your engineering team. I am confident that my blend of backend expertise and problem-solving skills will allow me to make an immediate, positive impact at Amnex.
