

karan

COVER LETTER

I am writing to express my strong interest in the Developer position at Amnex. As a final-year MCA student at L.J. University with a solid foundation in Java, Python, and backend architecture, I am eager to contribute my technical skills and problem-solving abilities to your development team. My academic background is complemented by certifications in Java, Python, SQL, and Data Structures & Algorithms, ensuring I am well-prepared to build efficient and scalable software solutions. Throughout my project work, I have gained hands-on experience designing robust applications and managing complex databases. For instance, I developed a YouTube Video Summarizer using Django and AI-based NLP that reduced review time by approximately 70%, and I built a comprehensive service-marketplace platform using Laravel and MySQL. My experience also includes creating cross-platform banking applications with Flutter and RESTful PHP APIs, where I focused on securing sessions and maintaining data integrity through relational database design. Beyond my technical projects, my time as an NCC Cadet—where I received the Best Leadership Award—has instilled in me a high level of discipline, teamwork, and initiative. I am confident that my ability to manage complex backend logic, combined with my commitment to continuous learning, makes me a strong candidate for Amnex. I look forward to the possibility of discussing how my skills and background can support your team's goals.
