

karan

COVER LETTER

I am writing to express my strong interest in the Developer position at Amnex. As a final-year MCA student with a robust foundation in Java, Python, and backend architecture, I am eager to contribute to your team by building efficient, scalable, and maintainable software solutions. My academic background, complemented by certifications in Java, Python, SQL, and Data Structures & Algorithms, has prepared me to tackle complex technical challenges with precision. Throughout my project work, I have gained hands-on experience designing relational databases and integrating AI-powered features. For instance, I developed a YouTube Video Summarizer using Django and MySQL that utilizes NLP to condense long transcripts, and I built a service-marketplace platform using Laravel that features role-based dashboards and secure authentication. These projects, alongside my work on a cross-platform banking application using Flutter and RESTful PHP APIs, have sharpened my ability to manage end-to-end development lifecycles and ensure data integrity. Beyond my technical skills, my experience as an NCC Cadet—where I received the Best Leadership Award—has instilled in me a high level of discipline, teamwork, and initiative. I am confident that my problem-solving abilities and my commitment to clean, functional code make me a strong fit for the development team at Amnex. I look forward to the possibility of discussing how my skills can support your ongoing projects.
