

karan

COVER LETTER

I am writing to express my strong interest in the Backend Developer position at Amnex. As a final-year MCA student with a robust foundation in Java, Python, and Django, I am eager to apply my technical skills to help build the efficient and scalable solutions that Amnex is known for delivering. My project experience highlights my ability to design complex backend architectures and integrate advanced features. For instance, I developed a YouTube Video Summarizer using Django and AI-based NLP that reduced review time by approximately 70%, and I built a cross-platform banking application featuring secure RESTful PHP APIs and MySQL database management. These projects, combined with my certifications in Java, Python, SQL, and Data Structures & Algorithms, have prepared me to contribute effectively to your development team from day one. Beyond my technical background, my time as an NCC Cadet—where I earned the Best Leadership Award—has instilled in me a high level of discipline, teamwork, and initiative. I am confident that my problem-solving mindset and hands-on experience with frameworks like Laravel and ASP.NET make me a strong fit for your organization. I look forward to the possibility of discussing how my skills can support the innovative work being done at Amnex.
