

AAYUSHIKUMARI ROHITBHAI PATEL

Backend Developer

Ahmedabad, Gujarat, India | +91 9664637209 | patelayushi1928@gmail.com | linkedin.com/in/patel-aayushi1944 | github.com/aayushi1944

PROFILE SUMMARY

Final-year MCA student with strong foundations in Java, Python, C, C++, Django, REST APIs, SQL, PHP, and MySQL. Hands-on experience developing server-side applications, designing relational databases, implementing business logic, and integrating APIs and AI-powered features. Strong knowledge of Data Structures & Algorithms, OOP, database management, and problem-solving, with project experience across web and cross-platform applications. Certified in Java, Python, SQL, and DSA and eager to build efficient, scalable, and maintainable backend solutions as an entry-level Backend Developer.

EDUCATION

Master of Computer Applications (MCA) | Expected 2027 |

L.J. University, Ahmedabad

1st Sem SGPA: 8.61

2nd Sem SGPA: 8.83

Bachelor of Computer Applications (BCA) | 2025

Veer Narmad South Gujarat University

CGPA: 7.84

Higher Secondary Education (12th)

67.84%

Secondary Education (10th)

69.67%

TECHNICAL SKILLS

- Programming Languages: Java, Python, C, C++, PHP
- Web Technologies: HTML, CSS, JavaScript
- Frameworks: Flutter, Django, Laravel
- Databases: MySQL, Oracle, SQLite
- Tools & IDEs: Git/GitHub, VS Code, IntelliJ IDEA, Visual Studio, Android Studio, Python IDLE, Spyder, Jupyter Notebook
- Core Concepts: Data Structures & Algorithms, Object-Oriented Programming

PROJECTS

YouTube Video Summarizer — *Django, MySQL, AI*

- Built a full-stack web application that accepts a YouTube video URL and automatically generates a concise, readable summary of its content, cutting video review time by an estimated 70%.
- Designed the backend architecture in Django, including URL routing, view logic, and form handling, supporting summarization requests for videos up to 30 minutes long.
- Integrated AI-based natural language processing techniques to condense transcripts of 1,000+ words into structured summaries within a few seconds per request.
- Modeled and implemented a relational database schema in MySQL to store video metadata, generated summaries, and request history for 100+ test records, and handled edge cases such as invalid URLs and unavailable transcripts.
- Implemented an interactive chatbot feature that answers user questions about the video's content, retrieving relevant context from the transcript/summary to generate accurate, content-grounded responses.

Service Provider (Home Services Platform) — *Laravel, MySQL*

- Built a service-marketplace web application where users can request home services such as plumbing, electrical work, gardening, etc., supporting 20+ service categories, with providers able to accept or reject incoming requests.
- Designed the backend in Laravel with role-based access for three user types — customers, service providers, and admins — each with a dedicated dashboard and permissions, tested across 10+ sample accounts.
- Modeled a relational database schema in MySQL covering users, service requests, provider responses, and feedback, with status tracking through each request's lifecycle (requested, accepted/rejected, completed).
- Implemented secure email OTP-based authentication in place of static passwords, verifying users via a one-time code sent to their registered email during login and signup, reducing invalid login attempts.

- Built a feedback system allowing users to rate and review completed services, with an admin panel to review feedback and monitor provider performance across all service categories.

Online Banking System — *Flutter, PHP, MySQL*

- Developed a cross-platform banking application using Flutter, enabling users to manage accounts and transfer funds securely from a single codebase, tested across 10+ simulated user accounts.
- Designed and built RESTful backend APIs in PHP covering user registration, login authentication, balance inquiry, fund transfer, and transaction history, with API responses returning in under 1 second.
- Modeled a relational database schema in MySQL with dedicated tables for users, accounts, and transactions, using foreign key constraints to maintain data integrity across 100+ sample transaction records.
- Implemented secure authentication and session management to protect sensitive financial data and prevent unauthorized account access.
- Built responsive Flutter UI screens for the account dashboard, fund transfer flow, and transaction history.

CERTIFICATIONS

- **Java — HackerRank** | Completed: March 29, 2026
- **Python — HackerRank** | Completed: August 16, 2026
- **Python — Coursera** | Completed: November 18, 2025
- **SQL — HackerRank** | Completed: June 23, 2026
- **Problem Solving — HackerRank** | Completed: May 31, 2026
- **Advanced Data Structures & Algorithms — Coursera** | Completed: May 31, 2026

LEADERSHIP & EXTRACURRICULAR

- National Cadet Corps (NCC) Cadet — Received the Best Leadership Award (2024–2025) for coordinating and motivating fellow cadets during training and camp activities, demonstrating discipline, teamwork, and initiative.
